NEWS IN BRIEF

High School Teaches Parenting Skills By Having Students Post Nonstop Photos Of Egg To Social Media

3/13/17 12:45pm

LOVELAND, CO—In an assignment meant to simulate the responsibilities of parenthood, pairs of juniors at Larimer County High School were each given an egg Monday and instructed to post nonstop photos of it to social media, sources reported. “For one week, students will be asked to deluge their various accounts with as many egg photos as possible, incorporating both candid and staged shots as well as emoji-filled captions about how happy the egg makes them,” said health teacher Beth Riddle, adding that top

grades would be awarded to pairs who posted at least once per hour and made ample use of hashtags like #ParentLife and #NumberOneEggDad. “The goal is to instill in these kids the idea that being a parent is no walk in the park—you can’t just take one picture and repost it to different accounts. I expect to see the egg in a variety of fun outfits, the egg playing with other eggs, and the egg sitting next to pastel-colored blocks indicating how many days old it is. There are no shortcuts in parenting and none in this assignment.” Riddle added that students could earn extra credit if their egg became a viral hit and booked an appearance on *Ellen*.

Agent Blue

BY TERESA MEI CHUC

To kill correctly
takes calculation.

Down to a science.

Arsenic
cacodylic acid.

Know water and rice
on a cellular level.

Make sure
no surviving
seed can be
collected
and planted.

Because even
a small seed
assures
survival.

Because
mortars,
grenades
and bombs
cannot destroy
a grain.

Because our
heart is made
of seeds.

Know what it
takes to kill
the seeds.

Know what it
takes to deprive
the plant of water,
to dehydrate it.

To be surrounded
by love but unable
to absorb it.
